### **Certified Practice Decision Support Tools Review & Update**

NNPBC in collaboration with multiple stakeholders is completing a review and update of the Registered Nurse Certified Practice Decision Support Tools (DST). The steering committee and working groups will ensure that the DST's continue to guide RN certified practice nurses in their assessments, diagnoses and treatments of clinical problems specific to their certification to ensure safe, quality care. The goal is to develop a transparent document management process that provides certified practice RNs with DST's that are up to date, evidence-informed, guided by clinical expertise, and translate well to practice areas.

Part of this refresh includes the development of a DST nurse provider submission form that has two purposes. First, to offer our nurse providers and opportunity to submit a request for any content changes. Second to offer our nurse colleagues and other DST partners an opportunity to provide NNPBC with feedback on the DST documents.

Please watch our [website](#) for details about how to submit feedback.
